European Technical Assessment

**ETA 15/0575
of 13/10/2015**

(English language translation, the original version in Czech language)

I General Part

Technical Assessment Body issuing the ETA:

Technical and Test Institute for Construction Prague

Trade name of the construction product TURBO-W, TURBO-WSA, TURBO-WSO,
TURBO-WSO PROTECT, TURBO-WSISI,
TURBO-WMAX PROTECT

**Product family to which the construction
product belongs**

Product area code: 4
External Thermal Insulation Composite
Systems with rendering on mineral wool MW
for the use as external insulation to walls of
buildings.

Manufacturer

KREISEL – Technika Budowlana Sp z o.o.
ul. Sz. Szeregow 23, 60-462 Poznan
Republic of Poland

**This European Technical Assessment
contains**

48 pages including 10 Annexes which form
an integral part of this assessment.

Annex No. 11 Control Plan contains
confidential information and is not included in
the European Technical Assessment when
that assessment is publicly disseminated.

ETAG 004, edition 2013, used as European
Assessment Document (EAD)

**This European Technical Assessment is
issued in accordance with regulation (EU)
No. 305/2011 on the basis of**

ETA-07/0118 valid from 29/06/2013 until
20/05/2017

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body - Technical and Test Institute for Construction Prague. Any partial reproduction has to be identified as such.

II Specific part

1 Technical description of the product

1.1 Definition and composition of the kit

This product is an ETICS (External Thermal Insulation Composite System) with rendering - a kit comprising components which are factory-produced by the manufacturer or component suppliers. The ETICS manufacturer is ultimately responsible for all components of the ETICS specified in this ETA.

The ETICS kit comprises a prefabricated insulation product of mineral wool (MW) to be mechanically fixed onto a wall. The methods of fixing and the relevant components are specified in the table below. The insulation product is faced with a rendering system consisting of one or more layers (site applied), one of which contains reinforcement. The rendering system is applied directly to the insulating boards, without any air gap or disconnecting layer.

The ETICS may include special fittings (e.g. base profiles, corner profiles ...) to treat details of ETICS (connections, apertures, corners, parapets, sills ...). Assessment and performance of these components is not addressed in this ETA, however the ETICS manufacturer is responsible for adequate compatibility and performance within the ETICS when the components are delivered as a part of the kit.

Composition of the ETICS

Table No. 1

	Components	Coverage (kg/m²)	Thickness (mm)
	Fully bonded ETICS with supplementary anchors. National application documents shall be taken into account.

Ancillary materials	Remain under the manufacturer's responsibility		

2 Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter "EAD")

2.1 Intended use

This ETICS is intended for use as external insulation of buildings' walls. The walls are made of masonry (bricks, blocks, stones ...) or concrete (cast on site or as prefabricated panels). The characteristics of the walls shall be verified prior to use of the ETICS, especially regarding conditions for reaction to fire classification and for fixing of the ETICS either by bonding or mechanically. The ETICS is designed to give the wall to which it is applied satisfactory thermal insulation.

The ETICS is made of non load-bearing construction elements. It does not contribute directly to the stability of the wall on which it is installed, but it can contribute to durability by providing enhanced protection from the effect of weathering.

The ETICS can be used on new or existing (retrofit) vertical walls. It can also be used on horizontal or inclined surfaces which are not exposed to precipitation.

The ETICS is not intended to ensure the airtightness of the building structure.

The choice of the method of fixing depends on the characteristics of the substrate, which may need preparation (see cl. 7.2.1 of the ETAG 004) and shall be done in accordance with the national instructions.

The ETICS belong to Category S/W2, according to EOTA Technical Report No 034.

2.2 Manufacturing

The European Technical Assessment is issued for the ETICS on the basis of agreed data/information, deposited with the Technical and Test Institute Prague, which identifies the ETICS that has been assessed and judged. Changes to the ETICS or production process, which could result in this deposited data/information being incorrect, shall be notified to the Technical and Test Institute Prague before the changes are introduced. The Technical and Test Institute Prague will decide whether or not such changes affect the ETA and consequently the validity of the CE marking on the basis of the ETA and if so whether further assessment or alterations to the ETA, shall be necessary.

2.3 Design and installation

The installation instructions including special installation techniques and provisions for the qualification of the personnel are given in the manufacturer's technical documentation.

Design, installation and execution of ETICS are to be in conformity with national documents. Such documents and the level of their implementation in Member States' legislation are different. Therefore, the assessment and declaration of performance are done taking into account general assumptions introduced in the chapters 7.1 and 7.2 of ETAG 004 used as EAD, which summarize how information introduced in the ETA and related documents is intended to be used in the construction process and gives advice to all parties interested when normative documents are missing.

2.4 Packaging, transport and storage

The information on packaging, transport and storage is given in the manufacturer's technical documentation. It is the responsibility of the manufacturer(s) to ensure that this information is made known to the concerned people.

2.5 Use, maintenance and repair

The finishing coat shall normally be maintained in order to fully preserve the ETICS performance. Maintenance includes at least:

- visual inspection of the ETICS,
- repairing of localized damaged areas due to accidents,
- the aspect maintenance with products adapted and compatible with the ETICS (possibly after washing or ad hoc preparation).

Necessary repairs should be performed as soon as the need has been identified.

It is important to be able to carry out maintenance as far as possible using readily available products and equipment, without spoiling appearance. Only products which are compatible with the ETICS shall be used.

The information on use, maintenance and repair is given in the manufacturer's technical documentation. It is the responsibility of the manufacturer(s) to ensure that this information is made known to the concerned people.

3 Performance of the product and references to the methods used for its assessment

The performances of the kit as described in this chapter are valid provided that the components of the kit comply with Annexes 1 – 10.

3.1 Safety in case of fire (BWR 2)

3.1.1 Reaction to fire (ETAG 004 - clause 5.1.2.1, EN 13501-1)

Table No. 2

Configuration	Heat of combustion	Flame retardant content	Euroclass according to EN 13501-1
Adhesive	max 0.61 MJ/kg	No flame retardant	A2 – s1, d0
boards of mineral wool MW maximal density 150 kg/m ³	In quantity ensuring Euroclass A1 or A2 according to 13501-1	/	
Base coat render	max. 0.61 MJ/kg	No flame retardant	
Glass fibre mesh	max 8.48 MJ/kg	No flame retardant	
Finishing coats	max 2.27 MJ/kg	No flame retardant	
Protection coats for mineral finishing coats	max 5.34 MJ/kg	No flame retardant	

Note: A European reference fire scenario has not been laid down for facades. In some Member States, the classification of ETICS according to EN 13501-1 might not be sufficient for the use in facades. An additional assessment of ETICS according to national provisions (e.g. on the basis of a large scale test) might be necessary to comply with Member State regulations, until the existing European classification system has been completed.

3.2 Hygiene, health and environment (BWR 3)

3.2.1 Water absorption (ETAG 004 - clause 5.1.3.1)

- Base coat **STYRLEP W 240/STYRLEP W 240 EXTRA**

3.2.5 Release of dangerous substances (ETAG 004 - clause 5.1.3.5, EOTA TR034)

No performance assessed.

3.3 Safety and accessibility in use (BWR 4)

3.3.1 Bond strength between base coat and insulation product (ETAG 004 - clause 5.1.4.1.1)

- Initial state: bond strength ≥ 0.005 MPa but cohesive failure in the insulation product
- After hygrothermal cycles: bond strength ≥ 0.003 MPa but cohesive failure in the insulation product
- After freeze-thaw cycles: bond strength ≥ 0.003 MPa but cohesive failure in the insulation product

3.3.2 Bond strength between adhesive and substrate / insulation product (ETAG 004 - clauses 5.1.4.1.2, 5.1.4.1.3)

Table No. 9

		Initial state	48 hours immersion in water + 2 hours, 23°C/50% RH	48 hours immersion in water + 7 days 23°C/50% RH
LEPSTYR W 230/ LEPSTYR W 230 EXTRA, STYRLEP B 225, STYRLEP W 240/ STYRLEP W 240 EXTRA	Concrete	≥ 0.25 MPa	≥ 0.08 MPa	≥ 0.25 MPa
	MW lamella	≥ 0.08 MPa	≥ 0.03 MPa	< 0.08 MPa and cohesive failure in the insulation product

3.3.3 Bond strength after ageing (ETAG 004 - clauses 5.1.7.1)

- After ageing: bond strength ≥ 0.003 MPa but cohesive failure in the insulation product
- After freeze-thaw cycles: ≥ 0.003 MPa but cohesive failure in insulation product.

3.3.4 Fixing strength (ETAG 004 - clause 5.1.4.2)

Test not required (no limitation of ETICS length).

3.3.5 Wind load resistance (ETAG 004 - clause 5.1.4.3)

- Insulation product MW board (TR15)

Table No. 10

Anchor description	Trade name		See Annex No. 9	
	Assembly method		Surface assembly	Countersunk assembly
	Plate diameter (mm)		60 or more	
MW board characteristics (TR15)	Thickness (mm)		≥ 50	≥ 100
	Tensile strength (kPa)		≥ 15

The characteristic crack width W_{rk} [mm] at a render strain value of 0.8%, determined with simple Method II pursuant to ETAG 004, cl. 5.5.4.1.

Table No. 31

Characteristic width of cracks W_{rk} [mm] at render strain value of 0.8%		
	Warp direction	Weft direction
R 117 A101	0.050	0.100
R 131 A101	0.050	0.050
R 167 A101	0.000	0.000
REDNET CB330 NOVA	0.000	0.000

The width of cracks in reinforced base coat at 2% elongation is equal or lower than 0.20 mm.

3.4 Protection against noise (BWR 5)

3.4.1 Airborne sound insulation

No performance assessed.

3.5 Energy economy and heat retention (BWR 6)

3.5.1 Thermal resistance

The thermal transmittance of the substrate wall covered by the ETICS is calculated in accordance with the standard EN ISO 6946:

$$U_c = U + \chi_p \times n$$

Where:

$\chi_p \times n$ has only to be taken into account if it is greater than 0.04 W/(m².K)

U_c global (corrected) thermal transmittance of the covered wall (W/(m².K))

n number of anchors (through insulation product) per 1 m²

χ_p local influence of thermal bridge caused by an anchor. The values listed below can be taken into account if not specified in the anchor's ETA:

= 0.002 W/K for anchors with a stainless steel screw covered by plastic anchors and for anchors with an air gap at the head of the screw

($\chi_p \times n$ negligible for $n < 20$)

= 0.004 W/K for anchors with a galvanized steel screw with the head covered by a plastic material

($\chi_p \times n$ negligible for $n < 10$)

= negligible for anchors with plastic nails (reinforced or not with glass fibres ...)

U thermal transmittance of the current part of the covered wall (excluding thermal bridges) (W/(m².K)) determined as follows:

$$U = \frac{1}{R_i + R_{render} + R_{substrate} + R_{ss} + R_{st}}$$

Where:

R_i thermal resistance of the insulation product (according to declaration in reference to EN 13162) in (m².K)/W

R_{render} thermal resistance of the rendering system (about 0.02 in (m².K)/W) or determined by test according to EN 12667 or EN 12664

$R_{substrate}$ thermal resistance of the substrate of the building (concrete, brick ...) in (m².K)/W

R_{ss} external superficial thermal resistance in (m².K)/W

R_{st} internal superficial thermal resistance in (m².K)/W

The value of thermal resistance of each insulation product shall be given in the manufacturer's documentation along with the possible range of thicknesses. In addition, the point thermal conductivity of anchors shall be given when anchors are used in the ETICS.

3.6 Sustainable use of natural resources (BWR 7)

No performance assessed.

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the European Commission decision 97/556/EC amended by the European Commission decision 2001/596/EC, the AVCP systems 1 and 2+ are valid (further described in Annex V to Regulation (EU) No. 305/2011).

Table No. 32

Product(s)	Intended use(s)	Level(s) or class(es) (Reaction to fire)	System(s)
External thermal insulation composite systems/kits (ETICS) with rendering	In external wall subject to fire regulations	A1 ⁽¹⁾ , A2 ⁽¹⁾ , B ⁽¹⁾ , C ⁽¹⁾	1
		A1 ⁽²⁾ , A2 ⁽²⁾ , B ⁽²⁾ , C ⁽²⁾ , D, E, (A1 to E) ⁽³⁾ , F	2+
	In external wall not subject to fire regulations	Any	2+

⁽¹⁾ Products/materials for which a clearly identifiable stage in the production process results in an improvement of the reaction to fire classification (e.g. an addition of fire retardants or a limiting of organic material)

⁽²⁾ Products/materials not covered by footnote (1)

⁽³⁾ Products/materials that do not require to be tested for reaction to fire (e.g. Products/materials of Classes A1 according to Commission Decision 96/603/EC)

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD:

In order to help the Notified Body to make an evaluation of conformity, the Technical Assessment Body issuing the ETA shall supply the information detailed below. This information together with the requirements given in EC Guidance Paper B will generally form the basis on which the factory production control (FPC) is assessed by the Notified Body.

This information shall initially be prepared or collected by the Technical Assessment Body and shall be agreed with the manufacturer. The following gives guidance on the type of information required:

1) ETA

Where confidentiality of information is required, this ETA makes reference to the manufacturer's technical documentation which contains such information.

2) Basic manufacturing process

The basic manufacturing process is described in sufficient detail to support the proposed FPC methods.

The different components of the ETICS are generally manufactured using conventional techniques. Any critical process or treatment of the components which affects performance are highlighted in the manufacturer's documentation.

3) Product and materials specifications

The manufacturer's documentation includes:

- detailed drawings (possibly including manufacturing tolerances),
- incoming (raw) materials specifications and declarations,
- references to European and/or international standards,
- technical data sheets.

4) Control Plan (as a part of FPC)

The manufacturer and the Technical and Test Institute for Construction Prague have agreed a Control Plan which is deposited with the Technical and Test Institute for Construction Prague in documentation which accompanies the ETA. The Control Plan specifies the type and frequency of checks/tests conducted during production and on the final product. This includes the checks conducted during manufacture on properties that cannot be inspected at a later stage and for checks on the final product.

Products not manufactured by the ETICS manufacturer shall also be tested according to the Control Plan. It must be demonstrated to the Notified Body that the FPC system contains elements securing that the ETICS manufacturer takes products conforming to the Control Plan from his supplier(s).

Where materials/components are not manufactured and tested by the supplier in accordance with agreed methods, then where appropriate they shall be subject to suitable checks/tests by the ETICS manufacturer referring to the Control Plan once again.

In cases where the provisions of the European Technical Assessment and its Control Plan are no longer fulfilled, the Notified Body shall withdraw the certificate and inform the Technical and Test Construction Institute Prague without delay.

Issued in Prague on 13/10/2015

Ing. Marla Schaan

Head of the Technical Assessment Body (TAB)

Annexes:

- Annex No. 1 Insulation product characteristics for bonded ETICS with additional mechanical fixing – MW lamella (TR80)
- Annex No. 2 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board (TR15)
- Annex No. 3 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board Frontrock MAX E (double density, TR10)
- Annex No. 4 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board Nobasil FKD S/ FKD S Thermal (TR10)
- Annex No. 5 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board Isover TF PROFI (TR10)
- Annex No. 6 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board ISOPANEL (TR10)
- Annex No. 7 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW double density board ISOPANEL FASROCK MAX (TR7,5)
- Annex No. 8 Insulation product characteristics for mechanically fixed ETICS with additional bonding – MW board Heralan-PTP-035 (TR5)
- Annex No. 9 Anchors, description of individual product characteristics contained in the ETA
- Annex No. 10 Description of the glass fibre meshes

Annex No. 1 Insulation product characteristics for bonded ETICS with additional mechanical fixing – MW lamella (TR80)

Description and characteristics	Regulation	Declared characteristics MW lamella (TR80)	
		Class, level according to EN 13162:2012	Value
Reaction to fire	EN 13501 -1+A1:2009	A1	Apparent density $\leq 150 \text{ kg/m}^3$
Thermal resistance		Defined in CE mark in accordance with EN 13162:2012	
Thickness	EN 823	T5	-1 % or -1 mm*, +3 mm
Length	EN 822	---	$\pm 2 \%$
Width		---	$\pm 1.5 \%$
Squareness	EN 824	---	$\leq 5 \text{ mm/m}$
Flatness	EN 825	---	$\leq 6 \text{ mm}$
Surface	ETAG 004	No additional treatment (homogenous, without coating)	
Dimensional stability under defined temperature and humidity	EN 1604	DS(70,90)	1 %
Water absorption	Short term water absorption	EN 1609	WS $\leq 1.0 \text{ kg/m}^2$
	Long term water absorption	EN 12087	WL(P) $\leq 3.0 \text{ kg/m}^2$
Diffusion factor (μ)	EN 12086 - EN 13162:2012	MU1	max. 1
Tensile strength perpendicular to the faces of insulation product in dry conditions	EN 1607	TR80	$\geq 80 \text{ kPa}$
Tensile strength perpendicular to the faces of insulation product in wet conditions	ETAG 004	---	$\geq 50 \text{ kPa}$
Shear strength	EN 12090	---	$\geq 20 \text{ kPa}$
Shear modulus of elasticity	EN 12090	---	$\geq 1000 \text{ kPa}$

* - highest value applies

Note: Classes and levels for individual characteristics comply with EN 13162:2012

**Annex No. 2 Insulation product characteristics for mechanically fixed ETICS
with additional bonding – MW board (TR15)**

Description and characteristics	Regulation	Declared characteristics MW board (TR 15)	
		Class, level according to EN 13162:2012	Value
Reaction to fire	EN 13501 -1+A1:2009	A1	Apparent density $\leq 150 \text{ kg/m}^3$
Thermal resistance		Defined in CE mark in accordance with EN 13162:2012
